

## Managing Water Resources: a Comprehensive Approach

*Alexander J.B. Zehnder, Alberta Water Research Institute (AWRI), Edmonton, Alberta, Canada*

In most places on this globe, water management is quite fragmented and dealt with independently in different sectors, like drinking water production, wastewater treatment, industrial water management, irrigation water supply, water for nature, etc. In my presentation, the different uses are analyzed and quantified. Using Alberta, Israel, and Singapore as example the water flows and the split into the various sectors will be shown. Based on the flows some thoughts will be presented of how water resources may be managed fairer and more efficient.
